Certificate in Mining Studies

A continuing education program of accredited short courses, webcasts and online courses for lifelong learning in mining.

www.EduMine.com

What is the CMS?

The CMS (Certificate in Mining Studies) is a continuing education program of accredited short courses, webcasts and online courses for lifelong learning in mining. It is designed for those seeking professional development, career advancement, cross training in different disciplines, or just an introduction to mining.

The CMS is also designed to the requirements of the global mining community. It minimizes the need for travel and time away from the job and allows you to complete the program in your own time.

The CMS is a blended learning program of online courses, short courses and interactive webcasts delivered by industry specialists. You can structure your own CMS program from a range of courses and providers to suit your objectives.

The CMS Network

The CMS network is a dynamic collaborative network of course providers administered by mining universities.

The Norman B. Keevil Institute of Mining Engineering at the University of British Columbia in Vancouver, BC is a founder and administrator of the CMS network. The Institute collaborates with EduMine on provision of qualifying short courses and webcasts. CMS certificates are awarded by the UBC Department of Continuing Education.

The Lowell Institute for Mineral Resources at the University of Arizona in Tucson, AZ is an administrator of the CMS network, and a provider of qualifying short courses and webcasts. The Institute awards Professional Certificates from the University of Arizona.

The Sauder School of Business at the University of British Columbia in Vancouver, BC is a provider of qualifying short courses on business and management topics.

EduMine is the provider of qualifying online courses for the CMS, and collaborates with UBC on provision of qualifying short courses and interactive webcasts.

CMS Resources

Qualifying courses are available in six mining streams...

- Exploration - Geology - Reserves
- Geotechnics - Rock Mechanics - Hydrology
- Environment - Social Issues - Health + Safety
- Mining Methods - Mine Planning
- Management - Risk - Financial
- Mineralogy - Mineral Processing

You can structure your own CMS program from a range of courses within these streams and from different providers, to suit your career objectives. Your personal CMS program may include courses from more than one stream.

EduMine provides more than 100 qualifying online courses representing more than 1500 hours of learning content in the streams listed above.

For 2011, the CMS program also includes more than 50 qualifying short courses and webcasts. To improve the accessibility of the program, EduMine is presenting a growing number of interactive webcasts.

CMS Requirements

- Registration for the CMS program.
- Study and completion of certification in qualifying online courses totalling at least 160 hours of study content.
- Attendance at qualifying short courses and/or webcasts totalling at least 9 days and completion of the required take-away projects.
- The total cost of the CMS, excluding travel and accommodation, is approximately \$10,000 depending on your selection of courses.

How The CMS Works

Register for the CMS with the University of British Columbia or the University of Arizona.

In your own time, register with course providers for selected online courses, short courses and webcasts. You may select courses from more than one stream.

Enroll with EduMine, register for certification in each of the selected online courses, and complete the requirements for online certification. You can spread your selection of online courses over time to suit your study schedule. Note that certain online courses will be associated with your selected short courses and webcasts. Study in these courses prior to attending the associated short course or webcast is a requirement of the blended learning program. These online courses should be included in your selection.

For each of your selected short courses and webcasts, register with the appropriate course provider. Complete the required background study in the associated online courses, attend each course, and complete the required take-away project. You can spread your selection of short courses and webcasts over time to suit your study schedule. Some travel may be necessary depending on your selection of short courses.

Collect all of your course certificates and submit them to the University of British Columbia or the University of Arizona to receive your CMS certificate.

If you have any questions regarding the Certificate in Mining Studies, please contact Sandra Wunsch at EduMine at swunsch@infomine.com or 604-683-2037 or Mac MacLachlan at UBC at mac@mining.ubc.ca or 604-822-4502.
