Mining 101 (1 day by Dr. Scott Dunbar, UBC Mining - $800)
Covers basic concepts of mining and mineral processing: how deposits are formed and found, how mines are financed and developed, how ore is processed, how the waste is disposed, how mineral products are marketed, and where the industry is going.

Mineral Property Valuation (1 day by Larry Smith, Barrick Gold - $750)
Covers reporting requirements for mineral deposit valuation according to different international standards such as NI43-101. Presents a variety of accepted approaches and methods for mineral property valuation.

Mine Project Economics (1.5 days by Dr. Scott Dunbar, UBC Mining - $1250)
Presents the fundamental aspects of valuation of mining projects with particular emphasis on the models used for valuation, uncertainties in the input to these models, and the role of the models in decision-making.

Valuation of Mineral Projects based on Technical and Financial Modelling (3.5 days by Prof. Dennis Buchanan, Imperial College - $2550)
Market turbulence emphasizes the need to understand the interrelationship between technical and financial risk, and the intrinsic value of a mineral project. Strategic planning can identify opportunities where market conditions undervalue the true long-term worth of assets. Ability to secure debt finance for both development and acquisitions allows greater strategic flexibility and permits an objective approach to determining levels of gearing.
